

Winland™ Electronics, Inc. is proud to introduce the WaterBug® Rope Kit and WaterBug® Rope Extension to the market which is planned for delivery beginning January 4, 2027. Please see our website product related information.

The new WaterBug® Rope Kit will connect to our WaterBug®, EnviroAlert® and EnviroAlert Professional® devices.

The WaterBug® Rope Kit (M-001-0185 – WaterBug® Rope Kit) will include:

1. One adapter to connect a Winland™ device to the water rope
2. One water rope
3. One 1M Ohm endcap resistor.
 - a. The endcap resistor is required for use with EnviroAlert® and EnviroAlert Professional® devices.
 - b. The 1M Ohm endcap resistor can simply be detached from the rope for use with the WaterBug® devices.
4. Please note that the WaterBug® Rope Kit will arrive with all three pieces attached to be a supervised sensor out of the box. The endcap resistor will have a blue shrink wrap around the resistor for easy visual indication. When the endcap resistor is removed, the sensor will be considered an unsupervised sensor and can be used with the WaterBug® devices.

The WaterBug® Rope Extension (M-001-0186 – WaterBug® Rope Extension) will include:

1. One water rope
 - a. The WaterBug® Rope Kit must be purchased to use with this rope.
2. Please note that this SKU will not work directly to any Winland™ device.

With this introduction, Winland™ will be making the below changes to the SKU offerings within our current WaterBug® category.

Winland™ will still offer the same WB200 device for sale, but it will be sold without the W-S-U, allowing the customer to select the sensor style best for their application. The name of the part number will simply be **WB200 Device Only** to help to differentiate from the existing SKU. The device will be the exact same WB200 sold today. The W-S-U has always been available for sale separately and will remain unchanged. When a purchase order is submitted to Winland™, it is recommended to use the **M-001-0180** to ensure that the **WB200 Device Only** is purchased. You can now customize to the end user's specifications of either the W-S-U or the WaterBug® Rope Kit and WaterBug® Rope Extension.

Existing Manufacturer
Part Numbers in use for WB200:
WB200 / WB-200 / M-001-0137

New Manufacturer
Part Number:
M-001-0180

New Manufacturer
Part Name:
WB200 Device Only

The existing WB350 will follow the exact same process as mentioned prior with the WB200 Device Only. Please update your system accordingly to order the M-001-0181 going forward which will be the WB350 Device Only SKU.

Existing Manufacturer
Part Numbers in use for WB350:
WB350 / WB-350 / 1047

New Manufacturer
Part Number:
M-001-0181

New Manufacturer
Part Name:
WB350 Device Only

We are excited to expand upon our water sensors available to meet the customer needs to protect valuable assets.

The existing SKUs below will be available until inventory is depleted:

1. WB200 (M-001-0137) – WB200 with the W-S-U
2. WB350 (1047) – WB350 with the W-S-U

At the time that the M-001-0137 and 1047 are fully depleted, the M-001-0180 and M-001-0181 will have to be ordered, plus the desired sensor(s).

Thank you,
Winland™ Team
